The Chairman of the 46th National Assembly
Mrs. Iva Miteva
SOFIA

Copy to:
The President of the Republic of Bulgaria Mr. Rumen Radev
Prime Minister of the Republic of Bulgaria Mr. Stefan Yanev
The Ombudsman of the Republic of Bulgaria, Mrs. Diana Kovacheva
The CEC Chairperson, Mrs. Kamelia Neykova
The chairmen of the parties represented in parliament in the 46th National Assembly

Subject:
European intelligent vote from the Republic of Bulgaria
European smart vote from the Republic of Bulgaria

Contents:

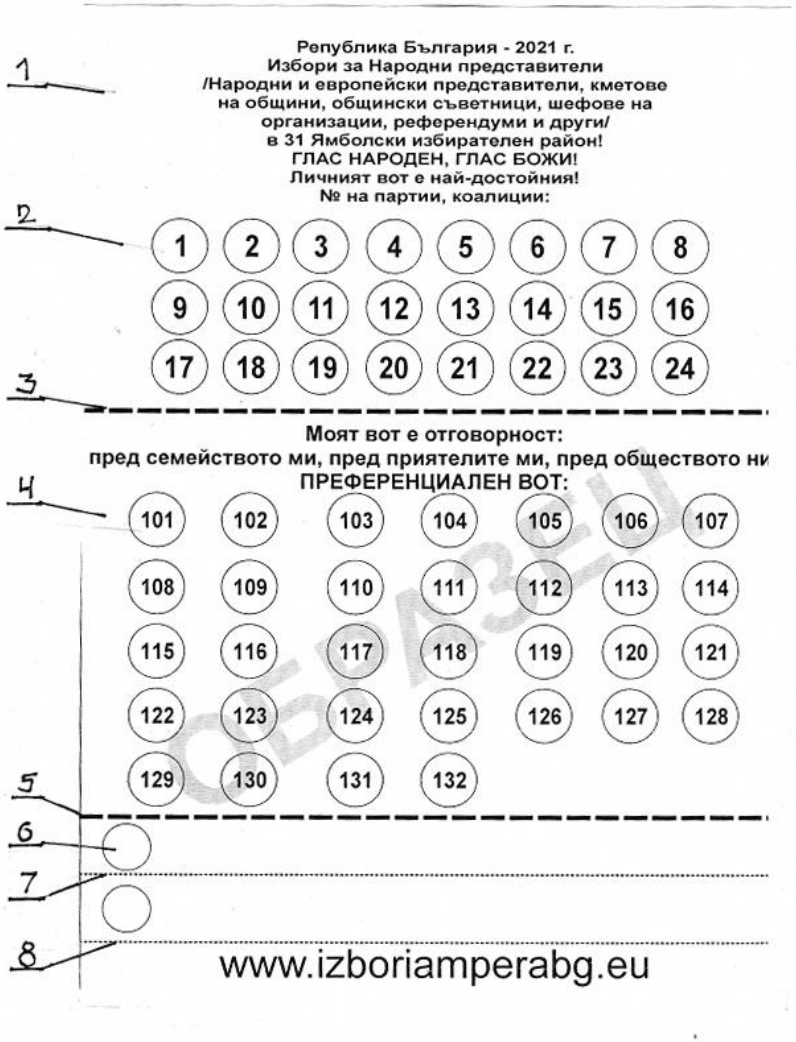

1. **Annotation.**
2. **Technology for conducting the vote.**
3. **Technology for verification and elaboration of the protocols.**
4. **Balance sheet for the money invested for one constituency.**

You will see the remaining paragraphs on the site below.

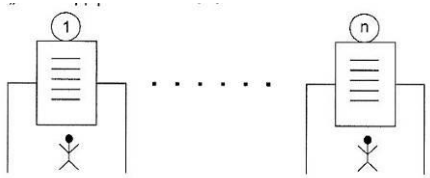

The decision is for alternative voting with a universal intelligent paper ballot and for counting the vote with other technical means compared to the status quo until July 11, 2021, in order to eliminate the negatives of public money invested for BGN 38 for the election section! "

Without any possibility to manipulate the vote!
With limited opportunities to become infected with covid-19!

1.Annotation:

The paper ballot is in A5 format and is applicable in a vote for President, , for Bulgarian and European MPs, Mayors, referendums, for party forums and others you can think of. Box 1 has a sample information text, the other 2 has numbers as many as the number of sections, coalitions and the last number is: I do not support anyone. After the perforated line 3 in field 4 is another sample training text and the numbers for the preferences determined by law, according to the number of voters. Between lines 5,7,8 there are two circles 6 for putting the number of the cell where the voting will take place and for putting at the moment of graphic protection against replacement of the ballot with another one. It does not have the names of parties, coalitions in small print, as in the old one, which most people can only see with glasses, which in some cases requires them to be a meter or more in length. of the vote, the folding and especially during the inspection, where the whole election commission participates, which is a wonderful living environment for the spread of the coronavirus. It is filled in by the voter at an open table facing the list of parties, coalitions, presidential candidates, MPs and others. This means that he stood with his back to the eyes of everyone in the hall: Commission, observers, advocates, citizens , without the possibility to see what his vote is, nor to record a purchased or corporate vote with GSM, without the possibility to "vote dead souls". starat and the bulletin. / 3 /

The newsletter is as simple as the graphics, super-intelligent to remind everyone that the vote is a matter of personal morality and responsibility!

In post-major circumstances, the vote and the inspection continue by candlelight. Laptops and printers are used, which are in millions of copies in our schools, universities, institutes, municipalities, town halls and are state property. Only BGN 30 will be invested for each polling station, for the purchase of a camera for monitoring the progress of the vote and especially for the inspection in counting centers, where the negotiation of purchased votes will be permanently and permanently suspended, with deliberate filling in other data in the protocols. do not correspond to reality, especially in some regions of the country, where the vote in all elections is always the same or until a certain time is one, and after another hour is completely different.Examples we saw on TV, heard on the radio.How to go now advocate to help him which number to mark with a cross, as was the practice in machine voting in Haskovo and elsewhere. They "helped" them by pressing their buttons. They showed it on TV.

With someone else's pie mother's memorial for your favorite party…

Enough.! More - not so!

And without carrying air conditioners and fans!

July 14, 2021

• Polina Paunova, Free Europe

Which is true: Turnout is over 40% or "below 30%"

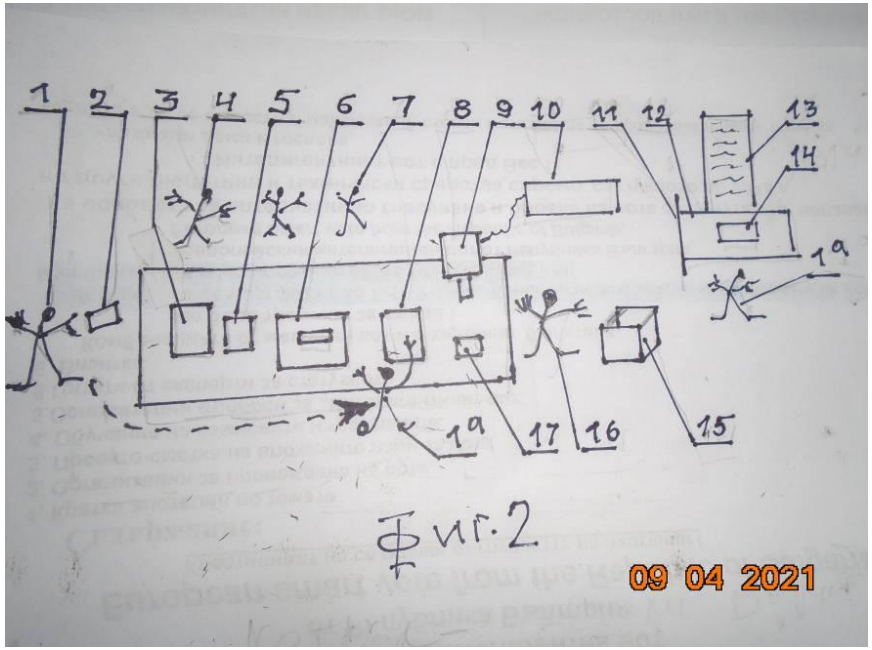

About the course of the election process with the new ballot

When allowed to vote, the voter contacts only two officials, and the verification of the vote for each ballot is within seconds, without throwing ballots as long as a scarf, without creating a living environment for the distribution of COVID 19, because this is done only by two officials who are dressed / 4 /

under certain standards, and not as before, by all members of the commission. From the experiments I found that the main time is not for filling in the ballot paper and by living people, but until he goes to the polling station, where the vote is made for a moment, because he will not "cuckoo" figuratively and popularly, to look for and put the cross of the favorite party, a coalition of the long ballot, which are printed in small print.There were people, even with the ballot and after turning, cast their ballots without going to the cell and are ready to hand it over to the official.And this can happen If there is a sticker like on the envelopes. No problems for elderly people who did not use glasses, because everything is close-up and you can see both the list and the big numbers on the ballot paper. The results of the vote are applied to three laptops, without writing, deleting and reporting according to a set program, as in competitions, as in the toto-slips. The protocol shall be printed with a printer, without writing, erasing and submitted to the District Election Commission, both on paper and electronically with a flash drive. From the polls conducted with friends, citizens, I have incredible support, but with one caveat that this accountability will not be to everyone's liking, because the vote cannot be manipulated at any time!

If I do not receive support from the native 46th National Assembly, I will address this offer to the embassies of other countries that talk about democracy. I will start with Israel, where voting is only with ballots. They have more literature, but it is effective. Why not simplify it? The current integrated ballot until July 18, 2021 should remain in history. To stop wasting our money on machine voting, which is not available in Europe !! ??? To stop the parallel printing of ballots to be used in post-major circumstances with machines and to be dispersed by security forces, security on the spot and then discarded. Unnecessarily invested our money! Only negatives that will disappear! / 5 /

I expect the people to be involved in this methodology en masse, so that we can choose the smartest, the most capable, the most creative! For Bulgarians abroad, nothing different. No distribution of machines, ballots, security, etc. The bulletin, their list is sent over the Internet. They print them out and organize their elections as here. With electronic signature send the results Organization of the Intelligent Vote - Fig. 4 As before for the admission to vote. An official at the entrance of the hall hands over to the voter 1 mask and surgical gloves, if there is still a pandemic of covid19, and as before he hands over his ID card 2 to the official 4 to check in the list 3 that he has the right to vote and puts it in place 5. Behind the table are the other members of the commission with masks at a regulated distance from each other. The voter is in physical contact with only two officials with protection against covid19. , advocates.

Fig.4 Another exemplary vision of the bulletin. **/ 6/**

From the stack 8 of the voter 1a, he takes the ballot himself and places it in the place 17 under the camera 9 of the laptop 10, raised high so that the monitor with the ballot paper can be seen by everyone, as in fig.5.

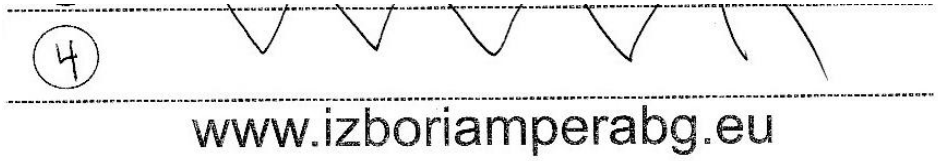

Фиг.5

Фиг.6

Фиг.8

Фиг.7

/7/

For graphic protection against replacement with a ready-filled one, the official 16 currently draws different lines, figures between lines 5,8, which can be seen in

real time from all of the monitor 10 and the bulletin gets the look of Fig.6. In the circles 6 he puts the number of the free open ballot box fig. 3. Tears off the ballot paper along the middle perforated line 7 and the lower control coupon, with the look of fig. .8, and goes in front of the open ballot box, Fig. 3 with a list in front of it. Above the selected party number, the coalition marks a cross with a ballpoint pen. The vote is visible. Seal it with a sticker taken from the album 14, or it will be
placed, as well as envelopes, so as not to open and get the look

Fig.9

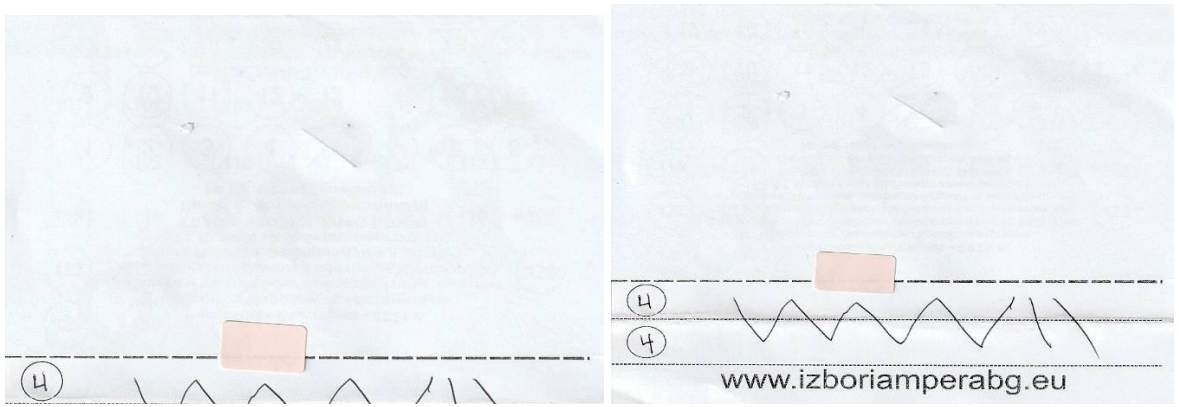

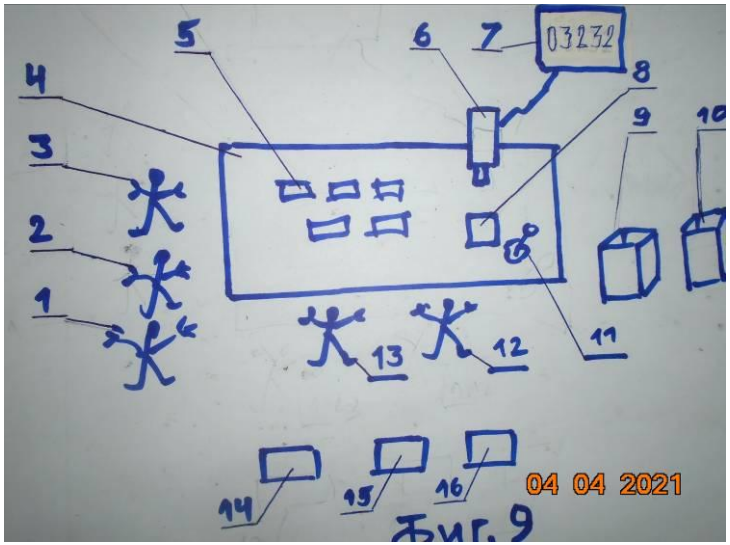

Fig.10

Fig.11

He presents it to the official 16, who brings it closer to the control coupon, fig. 7, and takes the form of fig. 11. Everyone is convinced that this is the ballot given to him. The voter puts it in the ballot box 8. The control coupon from Fig. 7, the official puts it in the waste box 15, because no one needs it anymore. *I 8I*

And so to the last voter. They can't "vote dead souls"!
The vote for president and others is absolutely identical!
Here's the other key! How will the vote be checked? Very easy!!!
It is a matter of a specific organization with the creation of counting centers, which is a big "trouble" for the polling stations with up to 100 and a little more voters. four-digit number for fraud in settlements with such sections. There the results have always been the same in all types of elections. This scam will be crossed forever. This was shown directly in April, this year in BTA by Iveta Lazarova, from the "Institute for the development of the public environment "The counting centers will be organized by the District Election Commissions by municipalities, town halls. Question of a specific organization by neighborhoods, unification of nearby villages. Operational freedom is great.
Bad..It will be very bad for some previous sections….
If in one school there are for example 6 sections. After the end of the vote they bring the ballot boxes with the ballots and pour them in front of everyone on the table 4 on a pile 5- fig.11.
It is unlikely that Presidents 1 and the other members of the sections will know each other personally each other and manipulate the vote.And to know how they will do it?
The check is done in front of everyone in the hall, it is broadcast on Facebook and everyone on their computer, smart phone, tablet will watch it and see this counting, and will only click that his party or candidate is not performing well. It will act absolutely educational for all types of elections.
Lying and deception, at least here, will disappear from consciousness!
Here are the members of the commissions, the advocates, the citizens, the operators 14,15,16 for applying the data on the laptops. The program will be free and everyone at home can get their results. It will also be broadcast on VIBER, where there is no technical possibility for external intervention.
Unlike the previous ballots, as long as scarves, the deputies invited *I 9 I*

specialists from sports betting to organize machine voting with them. They were told directly that it is impossible because they are too long and such a machine would be extremely expensive.
No problems with this newsletter, but I don't see the point in a machine check, so that the doubts about the software set there disappear once and for all.
The results in the counting centers will be transparent, like a lily of the valley!
The counting centers will be organized by the District Election Commissions in neighborhoods, town halls, municipalities, cities because they know the regions best.

Фиг.11

For greater expediency, one official 13 opens the ballots from the pile 5 and hands them to the other12, who shows it to everyone, reads the vote aloud on the microphone 11: 01132. He puts it in place 8 under the camera lens 6 and the vote is visible on the laptop 7 of all. If there is no other opinion from the presidents 1,2,3… .. that these are the numbers, he puts it in box 9, for regular ballots. At that time the operators of the three laptops 14,15,16 each recorded 01132 and gives enter.
The time for verification, voting is 10 - 15 seconds for each ballot! / 10/

The second bulletin shows: 03123. It is informed and recorded in the same way.
The third is visible: 10105 and is informed and recorded by the same technology.
The fourth is seen to be clean, unmarked and the official 11 puts it in the box 10 with invalid, but then it is counted that it was voted. Operators do not record anything. Only at the end are only the invalid ballots counted manually, which this time will be small, because there can be no confusion.
Fifth .. Indiscriminately scratched numbers - to the box 10 with invalid.
Sixth. There is a number 23 for a party, a coalition, but there are no preferences. Regular and put in box 9. and operators record 30,000
Seventh: The party, the coalition marked correctly with 25, and the preference is with two crossed out numbers - 109 and 111. The ballot is regular and the preference is wrong. Operators recorded 25,000
Eighth. The number 30 is applied - I do not support anyone. Regular and operators record: 31000 and put in the box 9.
Ninth. Crossed in several digits. Invalid in the basket 10.
There will be other marks that will be regulated by law…
Here I show the idea. And so to the last bulletin…
Here's the easiest, which was the hardest so far !.
Each operator gives a command for himself and in seconds the software arranges their result and preferences. As in competitions, at Eurovision for songs and performers… As in the lottery. is the amount..Also for the fives, etc. The results of the elections cannot be different - except the same. None of the operators can cheat. If there is a discrepancy - the ballots are in the box 10 and the data is entered again. will receive the same results. Only invalid ballots will be manually counted and added to the record for information. Once everyone agrees with the results, the ballots are poured into a bag and handed over to waste / 11 /

because no one needs them anymore so as not to pollute the environment.

The printer prints the results on a paper protocol. The chairmen of the sections sign that they agree with the vote. They write their data on a flash drive and take a protocol. personally in front of them in the electronic register and become publicly available for further inspection by the presidents, by citizens. There is no way to make changes, because everything is known how it was. They are transmitted in electronic form to the CEC, where they are processed without security guarding of bags with protocols.

At no extra cost!

What will they do with the ballots? Nobody needs them! Waste !!

Everything is transparent and clear about the vote!

Thus, it is possible to automate the vote report in a national global form. A matter of choice with software development. Our programmers are leading in the EU.

The results by sections, municipalities have them in electronic form. No more guards , no carrying sacks, replacement with others, fainting. The status quo in history!

How can you pay a vignette, taxes, civil from the phone! ??

It only takes willpower to act…

For the commissions and the citizens, elementary distance learning with a video. The program for checking the vote will be provided by the CEC after an auction and is uploaded on the laptops. All hope of manipulation and deception disappears.

Costs for consumables and equipment for furnishing a section at prices in stores:

1. **Chemicals 10 pieces of BGN 0.20… 002.00**
2. **Package A5 with 500 sheets costs …… 006.00**
3. **Camera …… ..030.00**

Total: BGN 038.00 !!! ???? Ha! ???

Haa ..Because there are millions of laptops and printers in our schools, universities, municipalities, town halls, which are state property. Why buy them? / 12 /

Only the only certified program will be retained and updated for future elections. Laptops come back with the cameras. Almost every week there are partial mayoral elections, referendums. This is a great opportunity to conduct experiments by the CEC.

We just want the will for change from the parliament!

As of today at 9 o'clock under the program "HORIZON". 100 voters to have machines !! ??? If one machine was used, the time for coping would increase by at least 30% and the vote would be difficult..Miracle! Unheard of in Europe!

Who wants to MAKE PEOPLE NOT VOTE AT ALL?

July 14, 2021

Polina Paunova, Free Europe

Which is true: Turnout is over 40% or "below 30%" ????

Even in his last speech he suggested to have machines in mobile polling stations. !!! ??? They could provide machines, but they could not provide chip cards. They would have nothing against the CEC inviting another company, which, even if it offers one lev less than our offer, we will not appeal. He said it live on HORIZON!

It is so simple with the offered ballot. The voter receives two differently arranged ballots. Next to the list of parties, coalitions will include the one for president! They are filled in for a moment for both votes. The most time is spent going to and from the polling station. Hardly everyone will go to the cell. He receives the ballot, turns around, puts the vote, seals the ballots and hands them over to the official for control. Nothing different than in just one vote !!
